Splined shafts for twin-screw extruders

Subcontracting

Cold forming, cold reduction, slotting and much more besides

Our business is the development, construction and sale of cold forming and slotting machines. However, we also offer all existing and potential customers the option of having their components made by the proven GROB production processes. For this purpose, we maintain a fully equipped subcontracting facility. We can take on assignments ranging from individual parts or small batches right through to high volume series produced in multi-shift operation.

This also puts us in a position to assist you optimally in bridging production bottlenecks or in the event of downtime.

Moreover, we produce bulk volumes of standard profiles to DIN 5480 in C45 and 42CrMo4, or to your own specifications and drawings.

We have equipment for all GROB production processes at our facilities. State-of-the-art design and manufacture of workpiece specific accessories and tooling is undertaken directly in-house.

Our subcontracting facility has been certified ISO/TS 16949 since 2005. In close cooperation with your own engineers, our team of specialists will identify the ideal process and matching solutions. We look forward to hearing from you and guarantee our optimal consultancy and support.

We are your partner for:

- Production start-ups
- Series production
- Bulk volumes
- Forming and slotting of sheet-metal components
- Reduction operations
- And much more besides

Subcontracting

- ▶ GROB quality
- ▶ Direct customer contact
- ▶ Prompt implementation
